

SCE SOLAR

Why Choose Us?

Sydney's Trusted
SOLAR & BATTERY
INSTALLATION SPECIALISTS
Established 2016

**Choosing the right solar and battery installer
is one of the most important decisions you
will make for your home or business.**

Here is why hundreds of Sydney clients
choose SCE Solar — and why you should too.

www.scesolar.com.au | Licence: 346101C | ABN: 23 635 324 131
Office Hours: Mon – Fri, 7:00am – 5:00pm

- **Established in 2016**
— with combined experience of 30+ years

Founded in 2016, SCE Solar began as a residential electrical specialist before expanding into solar and battery storage. Our directors bring a combined 30+ years of hands-on industry expertise and our work spans over 3,000 residential properties as well as high-profile commercial clients including Ports of Botany, Warriewood Surf Club, Bayview Golf Club and over fifteen IGA Supermarkets.

That track record matters. Too many solar companies enter the market with little experience and disappear within a few years, leaving homeowners with no one to call for warranty claims or technical support. Remember — a warranty is only as good as the company standing behind it.

With over a decade in business and a double-digit in-house team, SCE Solar is built for the long term — and so is your system.

- **In-House Installers Only**
— No Subcontractors

Every installation is carried out exclusively by our own trained and licensed in-house team. Our onsite team are all qualified and experienced electricians and roofers.

Qualified roofers are essential to maintain the roof's structural integrity. They ensure it is waterproof and can spot pre-existing issues before they become expensive issues post-installation. Solar systems are designed to last 25+ years and the roof needs to be in good condition to last just as long.

Many solar companies use subcontractors and even workers/backpackers with little to no industry experience — when issues arise, you can find yourself caught between a sales company and a sub ^n with nobody accepting responsibility, which can also create issues with warranty and insurance claims.

At SCE Solar, there is one team, one standard, and one point of accountability from the first consultation through to ongoing technical support.

An aerial photograph of a large, modern white house with a swimming pool. The house has several large solar panel arrays installed on its roof. The pool is a curved, light blue color. The house is surrounded by lush green trees and a paved driveway. The background shows a clear sky and some distant buildings.

- **Premium Products**
with Strong Australian Support

We only install products from manufacturers with a genuine, long-term presence in the Australian market.

If something develops a fault in year three — or year ten — you need to know the manufacturer still has a local support team to honour that warranty.

All products SCE Solar sources include labour within the warranty — not just parts — for the full warranty period, so you never have to pay extra.

Our relationship with you doesn't end at installation. Our team is on hand after your system is up and running to answer questions, help you get the most from your investment and respond if anything ever needs attention.

- **Protection**
from the Salt Air & Sun

Sydney's coastline exposes many homes and businesses to salt air, which accelerates corrosion on standard components.

At SCE Solar we specifically select panels, mounting hardware, and inverters rated for coastal conditions, and we use stainless steel cable ties rather than plastic ones that degrade in the harsh Australian sun.

These details matter for the long-term performance of your system and for your warranty.

- **5-Star Google Reviews ★★★★★**
— from Real Sydney Clients

Our reputation speaks for itself. SCE Solar holds a 5-star Google rating built from genuine reviews by real customers across Sydney.

We encourage every prospective client to read exactly what our clients say about the quality of our work, our communication, and our after-sales care.

Search 'Smooth Current Electrical & Solar' on Google to read them for yourself.

- **Quality Over Cheap**
— You Get What You Pay For

If a solar or battery quote sounds too good to be true, it usually is. Low-cost quotes often mean cheap components with high failure rates, limited warranties, and no local manufacturer support.

The real cost of a bargain system can far exceed what you saved upfront.

SCE Solar's unwavering commitment is to deliver the utmost quality in both products and installations — because your investment deserves to last.
